

## Waterbody

Custodian: The Corporation of the District of Saanich, GIS Section

Publish Date: January 1, 2003

Abstract: Waterbody represents significant areas of water accumulation within the District of Saanich. Waterbodies are naturally occurring geographical features for the most part, but can be man-made or artificial as well. The entire municipal water 'network' is comprised of connected open channel watercourses, waterbody areas, and storm pipes.

Purpose: Waterbody is captured to spatially represent all significant areas of water accumulation within the District of Saanich.

Status: In work

Update Frequency: As needed
